DESCRIPTORS: *Vital statistics, *Atherosclerosis,
Blood circulation, Heart.

Clinical statistics reveal certain patterns in coronary
atherosclerosis morbidity and sequelae. Although the
figures relate to only one town and one year, they give
a fair indication of the importance of coronary pathol-
ogy in general as a cause of death and disability. The
accumulation of such data in the future can constitute
an important landmark in the prophylaxis of coronary
atherosclerosis. (Author)
